Background Information

Why Permits?

Permits are here for your protection. They're the result of years of experience, testing and feedback. Having the proper permits will ensure what is being built is actually safe and that the appearance and use is consistent with the context of your neighbourhood.

What Permits are Required?

If you are proposing new development, renovations to existing development or changing the use of a current building, you may require permits from the City of Edmonton. Depending on the type of construction, you may need to apply for different types of permits. Some of the permits that may be required are:

Development Permit

A development permit ensures that the location, size and use of a building comply with the Edmonton Zoning Bylaw. Development permits and approvals need to be obtained for new construction, renovations, and changes to how a building is being used.

- All properties within the City of Edmonton are zoned and that zoning determines what type of building and what use is allowed. To determine the development regulations for your property, find your property's zoning designation at maps.edmonton.ca. Then look up your zoning designation in the **Edmonton Zoning Bylaw** (available at www.edmonton.ca).
- Development permit applications are classified as either Class A or Class B.
 - **Class A:** Permitted Use and comply with all of the regulations of the Edmonton Zoning Bylaw.
 - **Class B:** Discretionary Use or require a variance to any of the regulations in the Edmonton Zoning Bylaw. If the application is for a Class B development, notification of the application to the surrounding property owners is required.

Building Permit

While development permits regulate your property's appearance and use in the context of your neighbourhood, building permits make sure that what you build is actually safe. City building permits make sure that development on your property is up to the standards of the **Alberta Building Code**. Most developments require both a development and a building permit.

Mechanical and Electrical Permits

Mechanical permits regulate the utilities servicing a property. This includes the water and sewer lines, interior plumbing, gas, heating, ventilation, air conditioning, and electricity. If any construction includes mechanical work, separate permits may be required and are applied for separately.

- Separate permits are issued for each type of mechanical work that is being completed. This includes **HVAC, Plumbing, Gas, and Electrical**.
- Every building, mechanical and electrical permit requires payment of a safety code fee, which is collected on behalf of the Safety Codes Council. The safety code fee is calculated as 4% of the total permit cost with a minimum of \$4.50 and a maximum of \$560.

Additional Information

This document is not a complete list of the permits and fees that may be required. Additional permits and licences are issued by the City of Edmonton including: parking permits, pet licences, and business licences. For the complete fee listings, application forms and additional information visit www.edmonton.ca.
