April 5, 2024

2024 Pest Management Programs

The City of Edmonton's seasonal pest management programs will begin April 5, 2024 (weather depending) and will run until October 31, 2024. These programs help control mosquitoes in Edmonton and surrounding counties, noxious and prohibited noxious weeds and pests, and weeds causing structural damage to parks, roadways, buildings and other infrastructure.

The City of Edmonton utilizes its Integrated Pest Management (IPM) strategies to focus on minimizing the use of pesticides while ensuring the maximum effectiveness of pest management programs. Some pesticide usage, though, will be required. All pest control products and procedures the City of Edmonton uses meet strict standards established by Health Canada through the Pest Control Products Act. The City of Edmonton's pesticide applicators are trained to the required standards of Alberta Environment and Protected Areas.

For more information on strategies and pesticides used, to see ongoing updates of the City's IPM Policy, and to get daily updates of pesticide application activities, visit **edmonton.ca/pests**
