

SOLAR IN EDMONTON

Alberta is one of the sunniest places in Canada, and is geographically primed for solar.

1 BUT WHAT ABOUT OUR WINTERS?

Panels convert sunlight, not heat. The cold can actually improve panel efficiency.

2 BUT WHAT ABOUT SNOW?

Research shows that clearing snow barely improves output. Most owners don't clear their panels during the winter.

3 BUT WHAT ABOUT UPKEEP?

There's very little upkeep required, and rain and snow will generally clean the panel for you.

YEARLY PV POTENTIAL

[kWh/kW]
