

PLUG INSULATORS

Small air gaps around electrical boxes on exterior walls and ceilings leak more air than you'd expect. Plug insulators help seal the gaps.

- 1 TEST FOR A LEAK**
On a windy day, take an incense stick and hold it in front of your outlet. If the smoke moves horizontally, there is likely an air leak.

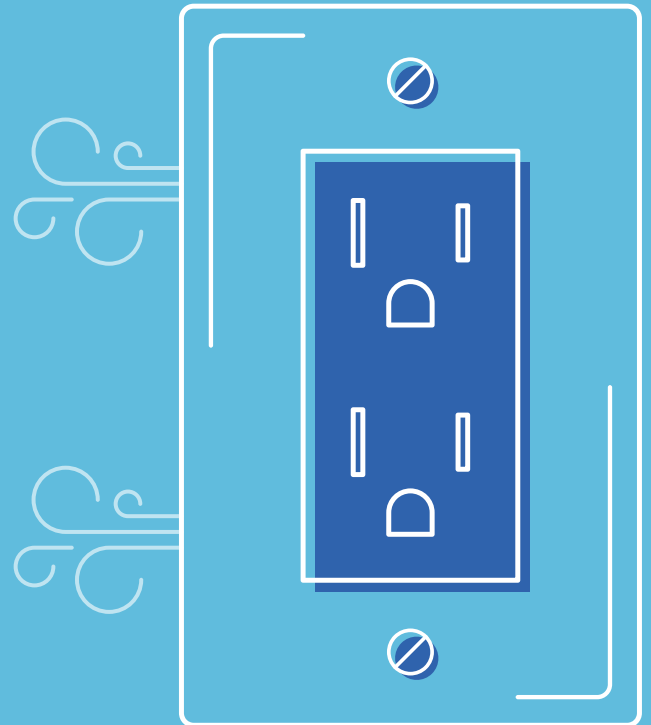

- 2 TURN OFF THE POWER**

- 3 UNSCREW THE OUTLET COVER**

- 4 INSTALL THE GASKET**
Press the foam around the outlet and then reattach the cover.
